WEBSITE CHOICE

NAME: TECH4CHANGE

Organisation description:

Tech4change is a south Africa social enterprise that empowers communities through technology they provide digital skill training coding workshops and IT support to bridge divide. some of their initiatives includes:

- . digital skill
- . innovation challenges
- . ict infrastructure

Tech4change likely started with a vision to address SA digital divide. Probably founded by passionate individual who saw the need to empower communities through tech skill they began working with local communities. providing training and support from there they've grown to tackle issue like digital inclusion and youth empowerment.

Tech4change is a 501 © nonprofit organization composed of technology supplies a channel partners dedicate to aiding grassroots charities across the u.s founded in 2014 by Angie Tocco over 1.75 million for local charities. the focus is on maximizing every dollar to go directly to

underserve cause through volunteer-driven fundraising and marketing initiatives.

Tech4change placed social platform tender request in the newspaper asking contractor to submit tender for a structure to help communities.

REASONS FOR CHOOSING THE ORGANISATION

BRIDGINBG THE DIGITAL DIVIDE: They're tackling the tech gap in SA empowering communities with digital skill.

EMPOWERING YOUTH: Providing training and opportunity for young people to thrive in the digital economy.

INNOVATIVE SOLUTION: Supporting youth innovators in developing tech solutions for social impact.

COMMUNITY-FOCUSED: Working with local communities to address specific needs and create sustainable impact.

Tech skill in demand: by 2026 south Africa will need experts in AI data engineering cloud architecture cybersecurity and develop particularly in fintech government digitization and health tech.

SOME KEY AREAS WHERE TECH IS DRIVING CHANGE INCLUDE:

RENEWABLE ENERGY

SMART CITIES

DIGITAL INCLUSION

WEBSITE GOAL AND OBJECTIVES

Tech4change goal and objective is to empower communities through technology. which include the following.

- 1 Provide digital skills training to underserve communities
2. promote innovation and tech entrepreneurship
3. bridge the digital divide in S.A
4. support social impact projects through tech solution

THIS IS MY ORGANISATION TECH4CHANGE and I use their business information to complete. now I have an idea on how to create my own website.my image is powered by Bing online.

POE PART 2 CSS

Improvements

unified the page structure for all pages so they all use the same header, navigation, main wrapper, and footer layout

centred the logo in the header on every page

changed the navigation to horizontal, removed list bullets, and made the links look like clean pills

applied a consistent background palette using cadet blue for the header/footer, white for content cards, and brown tones for borders and headings

made the main page content centred in a max-width wrapper, so everything stays aligned and readable

converted the hero text, info sections, contact card, and map area into visual “cards” with rounded borders, padding, and subtle shadows

styled the contact form with card-like borders, consistent input spacing, clearer labels, and a styled submit button

improved the carousel so it is visible longer and rotates more smoothly, with slides that occupy a full card area and do not disappear too fast

ensured the footer uses the same palette and sits consistently below the centred content

The update focuses on making the site look professional, consistent, readable, and easy to use. Every page now follows the same structural pattern: a centred header with logo and navigation, a main content wrapper for page sections, and a unified footer. This consistent page structure helps visitors understand the site immediately and makes it easier to maintain later.

PROJECT MILESTONE

Header and navigation were improved in several ways. The logo is centred on every page, which gives the visual hierarchy a stable starting point. The navigation menu was changed from a vertical list with bullets to a horizontal row of items. Bullets were removed, spacing was added, and each link was styled as a clean, rounded button. This improves usability, reduces visual clutter, and makes the menu feel modern and professional.

The main content now lives inside a centred page wrapper with maximum width and padding. That means text and sections no longer stretch too wide on large screens, and they remain aligned and comfortable to read. The sections themselves were grouped into “cards”: hero cards, content cards, the contact form card, and the map card. Each card uses a white background, brown borders, rounded corners, and gentle shadows. That creates clear visual separation between pieces of content and makes the layout feel polished.

The carousel was updated to behave better. It now keeps each slide visible for a longer period and advances smoothly. This means the rotating messages are easy to read and do not flash by too quickly. The slides are

full width inside their card container, which helps them feel integrated with the rest of the page instead of appearing as a separate element.

The contact form was styled as a card too, with consistent spacing, clear labels, and input fields that stand out. Form fields use brown borders and white backgrounds, with focus outlines in cadet blue. The submit button is a strong brown colour with a hover effect. These changes make the form easier to use, more inviting, and better aligned with the overall design.

Colour choices were intentional. Brown provides warmth, stability, and a grounded tone, which works well for borders, headings, and buttons. White keeps the content areas clean and easy to read. Cadet blue was chosen for the header, footer, and accent elements because it adds trustworthiness and a modern feel without overwhelming the palette. Together, brown, white, and cadet blue blend into a cohesive theme that feels professional and calm.

SEO and accessibility were also improved through the structure and content of the HTML. The pages use semantic tags like header, main, section, and footer, which helps search engines understand the layout. Headings are used in a consistent hierarchy, and the logo includes descriptive alt text. Navigation links are clear and descriptive, which helps both users and search engines. The contact form includes labels tied to each field, which improves accessibility for screen readers and helps search engines interpret the content as meaningful.

In summary, the site now presents a stronger brand identity, with improved layout, centred content, professional card styling, a better carousel, and a palette that blends well. The structural and semantic improvements also support better usability and search engine understanding.
